## Professional Summary

Recent B.Tech graduate in Artificial Intelligence and Data Science with internship experience in AI-powered automation, Microsoft Copilot Studio, and cloud-based application development. Proficient in **Python, SQL, Generative AI, LLMs, RAG, REST APIs, and FastAPI**, with hands-on experience building AI agents, workflow solutions, and enterprise integrations. Familiar with **Azure, Power Automate, Microsoft Graph API, and SharePoint**. Eager to contribute technical skills and problem-solving abilities to develop innovative AI applications and intelligent systems.

## Technical Skills

**Programming & Development:** Python, SQL, C++, FastAPI, Flask, REST APIs, Object-Oriented Programming (OOP), API Integration, Data Structures & Algorithms

**AI & Machine Learning:** Generative AI, Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Natural Language Processing (NLP), Deep Learning, AI Agents, Prompt Engineering

**Microsoft & Cloud Technologies:** Microsoft Azure, Microsoft Copilot Studio, Power Automate, Microsoft Graph API, SharePoint, Azure AD Authentication

**Developer Tools:** Git, GitHub, Power BI, IBM Watson, SharePoint Lists

## Professional Experience

**Microsoft Copilot & Automation Intern — Empathy Technologies — Onsite — Feb 2026 – May 2026**

- Developed AI-powered business solutions using **Microsoft Copilot Studio, Python, and Power Automate**, enabling intelligent process automation.
- Built and integrated **AI Agents** using **LLMs, Microsoft Graph API, and SharePoint** to automate RAID identification and centralized tracking.
- Engineered intelligent classification pipelines for processing organizational communications from **Outlook, Teams**, and meeting records.
- Implemented secure API integrations with **Azure AD Authentication** and contributed to the end-to-end development lifecycle within Agile teams.

## Key Projects

**RAID Tracking Automation using AI Agents — Python, LLMs, Microsoft Graph API, Azure, SharePoint**

- Developed an intelligent AI-driven system to identify, classify, and manage RAID (Risks, Assumptions, Issues, Dependencies) items from organizational communications.
- Built modular AI agents for **Outlook Email ingestion, LLM-based RAID classification**, metadata enrichment, duplicate detection, and SharePoint storage automation.
- Integrated **Microsoft Graph API, Azure AD Authentication, and SharePoint Lists** to enable secure enterprise integrations and centralized RAID tracking.
- Implemented intelligent classification pipelines using **Llama 3** and **GPT-5-mini** models for automated RAID extraction and contextual analysis.
- Improved RAID monitoring efficiency by approximately **70%** through intelligent classification, centralized tracking, and automated decision-support workflows.

**Financial Services Customer Churn Analysis — Python, SQL, Power BI, Machine Learning**

- Situation: Financial institutions faced challenges in identifying customers likely to discontinue services, leading to revenue loss and reduced customer retention.
- Task: Develop a predictive analytics solution to identify high-risk customers and support data-driven retention strategies.
- Action: Performed data preprocessing, exploratory data analysis, feature engineering, and machine learning model development using **Python** and **SQL**. Implemented classification algorithms and optimized model performance.
- Result: Achieved **82% prediction accuracy** and developed interactive **Power BI dashboards** to visualize churn insights, enabling proactive customer retention planning and business decision-making.

## Leave Management Agent — Copilot Studio, Power Automate, SharePoint

- Situation: Manual leave request and approval processes resulted in delays, inefficient tracking, and increased administrative effort.
- Task: Design an intelligent leave management solution to streamline employee leave requests, approvals, and status tracking.
- Action: Built a conversational AI agent using **Microsoft Copilot Studio**, integrated with **Power Automate** and **SharePoint** for automated leave submission, approval notifications, and centralized record management.
- Result: Enabled **100% digital leave tracking**, improved process efficiency, reduced manual effort, and enhanced transparency across leave management operations.

## Education

---

### Bachelor of Technology (B.Tech) in Artificial Intelligence and Data Science

Nehru Institute of Engineering and Technology — Coimbatore, India

2022 – 2026

## Achievements & Certifications

---

- Winner: Splunk Hackathon (Awarded INR 17,000 Prize)
- Won Goodies: Naukri Campus Young Turks 2025
- Secured **Rank – 6423** in the Naukri Campus Aptitude Test (NCAT) among nationwide participants.
- Certifications: **Cisco Python Essentials, Microsoft Azure AI Fundamentals, AWS ML Foundations, IBM AI with Python**
